Introduction

Formulary

The goal of the Blue Cross Blue Shield of North Dakota (BCBSND) formulary is to provide our members broad access to drugs and supplies at a reasonable overall cost. The BCBSND Drug Formulary is the list of products (drugs and supplies) that reflect the current recommendations of the BCBSND Pharmacy & Therapeutics (P&T) Committee. The formulary is intended for use in the ambulatory setting. Drugs are selected for addition to the formulary after considering safety, efficacy, uniqueness, and market considerations. **Providers are encouraged to prescribe formulary drugs.**

Benefits are not limited to the drugs on this formulary list. Products not listed in this formulary are non-formulary (NF). Exception: most diabetic supplies are covered at the highest benefit for plans that cover them. The P&T committee may choose to not add a drug or remove a drug from formulary for reasons including safety or efficacy concerns, or because a clinically similar, more cost-effective drug is already on formulary. Newly marketed drugs are non-formulary until reviewed by the P&T Committee. The entire formulary is reviewed annually by the P&T Committee. This formulary list is subject to change. **Drug coverage is dependent on individual plan benefits**.

Members

To save the most money on prescription drugs, take this Formulary with you each time you visit your physician. Consider asking your physician to prescribe drugs listed in this Formulary, if appropriate. Any and all decisions that require or pertain to independent professional medical judgment or training, or the need for, and dosage of, a prescription drug, must be made solely by you and your physician in accordance with the patient/physician relationship.

The current version and recent changes to this Formulary is available at the BCBSND website at **www.bcbsnd.com** or by calling the customer service number listed on your identification card. **Online pharmacy tools** are available through the Prime Therapeutics® website at **www.MyPrime.com**. BCBSND members can find drug cost estimates or check if a particular drug is on the BCBSND formulary.

Under some circumstances, formulary drugs may be excluded from coverage under the drug benefit (e.g., oral contraceptives, nicotine replacement therapy, Retin-A, various injectables, etc.). In all cases, plan inclusions/exclusions determine specific coverage regardless of formulary status. Drugs not listed are non-formulary. Exception: most diabetic supplies are covered at the highest benefit level for plans that cover them. However, only the preferred products are included on this list.

Providers

Generic Utilization

The BCBSND Committee encourages generic utilization as a way to provide high-quality drugs at a reduced cost. By prescribing drugs listed in this formulary that are available generically, you are providing a product that can be expected to have the same effectiveness and safety profile as the brand product while lowering overall medical insurance costs for your patients. In addition, your patient will likely have a lower cost share for generic drugs because most benefit plans are based on a tiered or brand/generic copayment and coinsurance structure.

Prior Approval

Use of some products identified by **PA** may be approved only after certain criteria are met. If prior approval is not obtained, benefits may be denied. A physician (or clinic personnel) should submit a written request to the address shown below for prior approval consideration. The Prior Approval Request form is available at https://www.thorconnect.org/docs/wcmd_014232.pdf. A list of the products requiring prior approval may be found at **www.bcbsnd.com** under pharmacy.

How to use this list

The Formulary is organized into broad categories (e.g. Anti-Infective drugs). Within most categories, drugs are sub-grouped by drug class (e.g. Penicillins) or by use for a specific medical condition (e.g. Diabetes). These categories can help determine which specific product is on formulary.

1 Drug Name	2 Prior Approval
ANTI-INFECTIVE AGENTS	
PENICILLINS	
amoxicillin caps, susp, tabs	
AMOXICILLIN chew tabs	
amoxicillin/potassium clavulanate (Augmentin – brand is NF)	
amoxicillin/potassium clavulanate ext-release (Augmentin XR – brand is NF)	
ampicillin caps	
AMPICILLIN susp	
AUGMENTIN susp, 125 mg/5 mL – amoxicillin/ potassium clavulanate	
dicloxacillin	
penicillin v potassium	

1 The first column of the chart lists the drug name. Generic drugs are shown in lower-case **boldface** type. Most generic drugs are followed by a reference brand drug in (parentheses). The reference brand drug is a non-formulary (NF) brand and is only included as a reference to the brand. Some generic products have no reference brand.

Example: **amoxicillin/potassium clavulanate ext-release** (Augmentin XR – brand is NF)

Formulary brand drugs are listed in all CAPITAL letters, followed by the generic name.

Example: ZYTIGA - abiraterone

The following examples are given to assist you and your doctor in reading listings that include specific strengths and dosage forms. These examples can be applied to other drugs on the formulary. Any exceptions are noted and some listings contain additional information about specific products or dosage forms.

- **Extended-release and delayed-release products require their own entry.**

  Example: DETROL LA - tolterodine ext-release

  The long-acting product Detrol LA is on the formulary, but requires a separate entry from the non ext-release product Detrol.
- **Some products may show a strength; if so, only the strength indicated is on the formulary.**

  Example: XIFAXAN 550 mg - rifaximin

  The Xifaxan 550 mg is on the formulary in this case, but the Xifaxan 200 mg is not because it is not listed.

2 The second column indicates the Utilization Management (UM) program(s) that apply to the prescription drug (e.g., Prior Approval). If an indicator is present in the column(s), then the UM program noted is possibly applied to your benefit. Some plans may have UM on additional medications beyond those noted in this document.

Dosage forms

For each drug listing, the formulary includes all strengths of the oral dosage forms of the short-acting (immediate-release) product, including capsules, tablets, and liquids, unless noted otherwise. Drugs that are not immediate-release require a separate drug entry. Products not listed in this formulary are non-formulary (NF).

Separate drug entries are required for some dosage forms, including:

- Drugs having longer release or modified release:
- controlled-release = CR
- delayed-release = DR
- extended-release = ER
